## What is the afa Clay Peel?

Available only in professional settings, this revolutionary two-step treatment creates clearer, smoother, more evenly toned skin with little to no downtime. The afa Clay Peel begins with a unique, bentonite clay mask that clears surface debris and draws out oils and impurities, preparing the skin for application of the Antioxidant Facial Peel in Step 2. Patients experience exceptional results with little to no irritation and no photosensitivity. afa Clay Peel can be performed as a stand-alone treatment, though a series of three to six treatments performed every 2-3 weeks is recommended for optimal results when addressing more stubborn skin concerns.

## What is the power behind the afa Clay Peel?

The science behind the afa Clay Peel's unique efficacy is afaLUXE™. Synergizing a unique blend of antioxidants and a novel molecular technology, afaLUXE™ harnesses a very low pH with powerful brighteners and amino acids to provide genuine skin renewal and barrier restoration for nearly all skin types.

## Why does it matter that the afa Clay Peel improves the skin's natural moisturizing factors?

Skin-damaging UV rays can create coarse texture, dark spots and photopigmentation. Effectively addressing these issues can be incredibly difficult, and the treatments themselves often cause irritation, which can result in further skin damage. The skin's natural moisturizing factors (NMFs) play an important role in maintaining proper barrier functions like moisture maintenance, cellular turnover and collagen production. afaLUXE™ is specifically formulated to work synergistically with filaggrin (an NMF) to enhance and support skin's performance.

afa Restorative Gels are available in four strengths: Acne Care (9%), Mild (11%), Plus (15%) and Max (19%). These gentle yet powerful exfoliators:

- ☑ Encourage cell renewal
- ☑ Rejuvenate the complexion
- ☑ Address typical signs of aging
- ☑ Refine tone and texture
- ☑ Reduce the look of enlarged pores
- ☑ Support collagen production
- ☑ Are non-comedogenic, fragrance-free and hypoallergenic

---

*"The Clay Peel is one of the most powerful yet gentle peels I have ever used. Its brilliance is in the fact that it can reverse sun damage without significant irritation. Melasma is also improved in most cases, and it is the perfect accompaniment to any brightening system!"*
